

CK_GOLD_COMBO_v2 Expert Advisor

Complete Proof of Authorship & Technical Documentation

EA File Name	CK_GOLD_COMBO_v2.mq5
Version	2.00
Symbol	XAUUSD only
Platform	MetaTrader 5 (MT5)
Target Account	FundedNext Stellar 2-Step \$6,000
Document Date	September 22, 2026
Author	Account Holder (the trader)
Compilation	✓ 0 errors, 0 warnings

1. Statement of Authorship

I, the account holder, developed **CK_GOLD_COMBO_v2** as my personal Expert Advisor for trading XAUUSD on FundedNext. This EA is:

- **NOT purchased** from any marketplace (MQL5 Market, etc.)
- **NOT licensed** from any third party
- **NOT copied** from any existing EA
- **Uniquely developed** for my FundedNext account

Development Evidence:

- **278+ ledger records** in `SPEC/dof_ledger.json1` (SHA-256 hash-chained, tamper-evident)
- **26 development days** (August 28 → September 22, 2026)
- **58+ pre-registrations** (hypothesis declared BEFORE running backtest)
- **15+ explicit rejections** (failed variants dropped, not tuned)
- Ledger verification: `python SPEC/dof_ledger.py verify` → **"integrity: OK"**

2. What This EA Does

CK_GOLD_COMBO_v2 runs **three independent validated strategies** on XAUUSD:

Strategy	Magic Number	Logic	Direction
FIX09	20260716	H1 EMA-200 trend + M15 pullback breakout	Long/Short
DTREND	20260930	H4 EMA crossover + D1 trend confirmation	Long only
DONCHIAN	20260903	20-bar M15 close breakout (Turtle style)	Long/Short

Master Account Guards (FundedNext Compliance)

- **Static DD Halt:** Stops at 8% loss (buffer under FN 10% rule)
- **Daily Loss Flatten:** Closes all at 4.5% daily loss (buffer under FN 5% rule)
- **Predictive Daily Governor:** Blocks entries that could breach daily limit
- **Combined SL Risk Check:** Prevents multi-position overnight disasters
- **Margin Ceiling:** Max 60% margin used (buffer under FN 80% rule)
- **News Gate:** ± 6 minute block around high-impact releases

3. Backtest Results — \$6,000 Account

Period: October 2025 → September 2026 (11.5 months), Model 1 (1-min OHLC)

Month	Gross P&L	Trades	80% Take	BDT (Rs 120/\$)
2025-10	+\$1,360	88	\$1,088	Rs 130,602
2025-11	+\$434	68	\$347	Rs 41,617
2025-12	+\$238	78	\$191	Rs 22,861
2026-01	+\$503	74	\$403	Rs 48,334
2026-02	-\$258	60	-\$206	Rs -24,727
2026-03	+\$1,000	66	\$800	Rs 95,987
2026-04	-\$457	69	-\$366	Rs -43,915
2026-05	+\$75	70	\$60	Rs 7,169
2026-06	+\$495	71	\$396	Rs 47,502
2026-07	-\$215	81	-\$172	Rs -20,642
2026-08	+\$615	80	\$492	Rs 59,017
2026-09	+\$252	41	\$201	Rs 24,145

Total Trades	846
Total Gross Profit	\$4,041.15
Take-home (80% split)	\$3,232.91
Win Rate	26.6% (225 W / 621 L)
Worst Single Day	-\$249.02 (Jan 28)
Days Exceeding \$300	0 (FN compliant)
Average Monthly	\$269 = Rs 32,329
Annual Return	70.3% on \$6k

4. FundedNext Rule Compliance

Rule	FN Threshold	EA Configuration	Backtest Result
Daily Loss	5% = \$300	Governor at 4%	PASS — worst day −\$249
Max Overall Loss	10% = floor \$5,400	Halt at 8%	PASS — never approached
Margin Usage	Max 80%	Clamp at 60%	PASS
EA Allowed	Yes (< \$50k accounts)	MT5 EA	PASS
Weekend Holdings	Permitted	Allowed	PASS

5. Bug Discovered and Fixed During Development

This section proves this EA was developed iteratively, not purchased.

Bug: September 2, 2026 Daily Breach

- **Symptom:** -\$497.70 loss on Sep 2 (exceeds FN \$300 daily limit)
- **Cause:** Two overnight SELL positions hit stop-loss together

Root Causes Found

1. **Integer Overflow:** `DN_Magic = 20260921003` exceeded int32 max (2,147,483,647), became -1,213,915,477 in MT5 → position tracking failed
2. **Missing Combined Risk Check:** The EA checked each new trade's risk but not the combined SL risk of already-open positions

Fixes Applied (Ledger seq276b)

```
// Fix 1: Changed DN_Magic to fit int32 input long DN_Magic = 20260903; // was 20260921003 (overflow) //
Fix 2: Added combined SL risk function double G_OpenSLRisk(){ double totalRisk = 0; for(int i =
PositionsTotal()-1; i >= 0; i--){ // ... calculates worst-case SL loss of ALL open positions totalRisk
+= slDist * lot * moneyPerPoint; } return(totalRisk); } // Fix 3: Modified G_RiskBlocksEntry() to
include existing risk double existingSLRisk = G_OpenSLRisk(); if(usedToday + existingSLRisk +
newTradeRisk > dailyBudget) return(true); // block the new entry
```

Result After Fix:

- Sep 2, 2026: -\$497 → **+\$224.74** (breach eliminated)
- Net profit: \$2,430 → **\$4,041** (+67% improvement)
- Daily breach days: 1 → **0**

6. Development Timeline

Seq	Date	Type	Decision
1	2026-08-28	BASELINE_FREEZE	Design v1.0 locked; XAUUSD-only
148	2026-09-01	RESEARCH	Gold trend edge confirmed across 22 variants
182	2026-09-03	FUNDED_FIX_CONFIRM	Funded config validated (real-tick)
208	2026-09-15	CRITICAL	Margin ceiling rule discovered
252	2026-09-18	PREREG	Settlement window block added
276	2026-09-22	BUG_FIX	Combined SL risk check (seq276b)

7. Frequently Asked Questions

Q: Where did you get this EA?

A: I developed it myself over 26 days (Aug 28 – Sep 22, 2026). Every design decision is recorded in a hash-chained ledger with 278+ entries. No purchased EA comes with this level of documentation.

Q: How can I verify you wrote it?

A: Run `python SPEC/dof_ledger.py verify` in my repository. The ledger is SHA-256 hash-chained — any tampering breaks the chain and is detectable. Each entry has a timestamp, hypothesis (PREREG), and result.

Q: Why does a purchased EA not have this?

A: Purchased EAs are black boxes — you get the compiled .ex5 file only. My EA has the full .mq5 source code (820+ lines), every decision logged, 15+ failed experiments honestly recorded, and bugs I discovered and fixed myself (like the int32 overflow).

Q: What strategies does it use?

A: Three independent strategies: (1) FIX09 — H1 trend + M15 pullback breakout, (2) DTREND — H4 EMA crossover trend-follow, long-only, (3) DONCHIAN — 20-bar M15 close breakout. Each has its own magic number so trades don't collide.

Q: How does it stay within FundedNext rules?

A: The EA has multiple guards: (1) Static DD halt at 8% (under your 10%), (2) Daily loss flatten at 4.5% (under your 5%), (3) Predictive governor blocks risky entries, (4) Combined SL risk check prevents multi-position disasters, (5) Margin ceiling at 60% (under your 80%).

Q: Can you show me the source code?

A: Yes. The full source is in `CK_GOLD_COMBO_v2.mq5` (820+ lines). I can share any section you want to inspect. The file compiles with 0 errors, 0 warnings.

Q: What is the win rate?

A: 26.6% (225 wins / 621 losses) over 846 trades in 11.5 months. This is a trend-following system — it has many small losses and fewer large wins, resulting in +\$4,041 gross profit (+70.3% on \$6k).

Q: What was the worst day?

A: −\$249.02 on January 28, 2026. This is under the FundedNext \$300 daily limit. After fixing the Sep 2 bug, there are zero days that exceeded \$300.

Q: Does it trade during news?

A: The EA has an optional news gate (`Combo_UseNewsGate`) that blocks entries ± 6 minutes around high-impact releases. This helps avoid the 40% profit haircut on news trades in funded accounts.

Q: What if I need to verify the ledger?

A: The ledger file is `SPEC/dof_ledger.jsonl` . Each line is a JSON record with: sequence number, timestamp, type (PREREG/RESULT/BUG_FIX), description, and SHA-256 hash of the previous record. The verification script checks that every hash matches.

8. Technical Verification Commands

```
# Verify ledger integrity python SPEC/dof_ledger.py verify # Count ledger entries (Get-Content
SPEC/dof_ledger.jsonl).Count # Compile the EA (0 errors expected) metaeditor64.exe
/compile:CK_GOLD_COMBO_v2.mq5 # Check magic numbers in code Select-String -Path CK_GOLD_COMBO_v2.mq5 -
Pattern "Magic\s*="
```
